

## SCALE FOR PROJECT SYMFONY - 0 - INITIATION (/PROJECTS/SYMFONY-0-INITIATION)

You should evaluate 1 student in this team

Git repository

git@vogsphere.42paris.fr:vogsphere/intra-uuid-c0d311ad-a857-4a2b-93c 

### Introduction

For the good of this evaluation, we ask you to:

- Stay mannerly, polite, respectful and constructive during this evaluation. The trust between you and the 42 community depends on it.
- Bring out to the graded student (or team) any mistake she or he might did.
- Accept that there might be differences of interpretation of the subject or the rules between you and the graded student (or team). Stay open minded and grade as honestly as possible.

### Guidelines

- You must grade only what is present and the graded student's (or team) repository.
- You must check that the GIT repository belongs to the corrected student or group.
- Check meticulously that none alias has been used to make you correct anything else than the content of the official repository.
- Any script provided by the corrector or the corrected must be meticulously checked to avoid any surprises.
- If the corrector has not done this project, he must read the entire subject before anything else.
- At the end of the grading you must use one or more of the displayed flags to notice any problems with the project such as an empty repository, a non properly working project or a cheating case.  
It is strongly recommended to continue the grading even if the grade has to be 0 (exception made in the case of a cheated project).
- You must stop grading at the first failed exercise, but you are encouraged to continue testing and discussing the following exercises.

# Preliminaries

*This section is dedicated to setup the evaluation and to test the prerequisites. It doesn't rewards points, but if something is wrong at this step or at any point of the evaluation, the grade is 0, and an appropriate flag might be checked if needed.*

## Respect of the rules

- The graded student (or team) work is present on her or his repository.
- The graded student (or team) is able to explain her or his work at any time of the evaluation.
- The general rules and the possible day-specific rules are respected at any time of the evaluation.
- For this project, you have to clone their Git repository on their station.

☑ Yes

✗ No

# Training PHP Symfony - 0 - Initiation

*- If you found an error in an exercise, the entire exercise is wrong. No half measure or "so tiny error, it's nothing", either the work is perfect or it isn't. - Either the student displays unit test or not, you must test his work entirely and consider if the work is done or not. - The page displays must be master: no strange behaviour, strange character not handled in the display, etc. Clean work or watch above.*

## Ex00, First Shell script

- The used interpreter is `/usr/bin/sh`
- The script can be executed using the command `"$>./myawesomescript.sh http://bit.ly/1bhjUN8 (http://bit.ly/1bhjUN8)"` (without passing it with `sh`), the return is `"http://duckduckgo.com (http://duckduckgo.com)"` in this case.

The exercise is considered as failed if one of the instructions is not perfectly done.

☑ Yes

✗ No

## Ex01: Your résumé in HTML

- The document actually contains a doctype (`html`), a head and a body.
- All the beacons are well formatted, their semantics and the separation between the background and the shape is respected (no `h1` to enlarge text for exemple). This applies on tabs and lists too.
- There is no unexpected or weird display. (This applies on tabs and lists too, the special characters (including accents) are handled.)
- Presence of an (`h1`) headtitle, a tab, a `<title></title>` and a list (well formatted about the content representation).
- Tabs has a clearly visible border (`border-style: solid;`) and merged (`border-collapse: collapse;`).
- The last cell (at the bottom right) of each tab has the color `#424242`.
- Both of the previous rules does not applies on the cell's content. (Not text, list, or div in a tab with visible borders for example).
- The CSS's rules for `"border-style"` and `"border-collapse"` are in in a beacon couple `<style></style>` in the part `<head></head>`.
- The CSS rule for the color of tabs last cells must be found in the HTML beacon symbol: `"style"`.

The exercise is considered as failed if one of the instructions is not perfectly done.

☑ Yes

✗ No

## Ex02: E-mail sending form

Before starting the defense, copy the file `popup.js` provided in annex of the subject in the subfolder `ex02`.

- The document actually contains a doctype (html), a head and a body.
- All the beacons are well formatted, their semantics and the separation between the background and the shape is respected (no h1 to enlarge text for exemple). This applies on tabs and lists too.
- There is no unexpected or weird display. (This applies on tabs and lists too, the special characters (including accents) are handled.)
- The form is there and contains fields asked in the subject.
- The form validation shows the popup as requested.

The exercise is considered as failed if one of the instructions is not perfectly done.

 Yes

 No

### Ex03: Reproduce a webpage

Before starting the defense, copy the file style.css provided in annex of the subject in the subfolder ex03.

- The document actually contains a doctype (html), a head and a body.
- All the beacons are well formatted, their semantics and the separation between the background and the shape is respected (no h1 to enlarge text for exemple). This applies on tabs and lists too.
- There is no unexpected or weird display. (This applies on tabs and lists too, the special characters (including accents) are handled.)
- Copy a fresh version of the css file provided in annex of the subject in the directory containing the file copy.html, then, open copy.html in a browser. Is the webpage exactly the same as the provided model ? We shall tolerate a tiny difference of scale, but that's all. Be aware about details and dont hesitate to nitpick.

The exercise is considered as failed if one of the instructions is not perfectly done.

 Yes

 No

### Ex04: Integration of JS's snippets

Before starting the defense, copy the JS's scripts provided in annex of the subject in the subfolder ex04.

- The document actually contains a doctype (html), a head and a body.
- All the beacons are well formatted, their semantics and the separation between the background and the shape is respected (no h1 to enlarge text for exemple). This applies on tabs and lists too.
- There is no unexpected or weird display. (This applies on tabs and lists too, the special characters (including accents) are handled.)
- No used JavaScript code must be visible directly in the HTML code.
- The only used JavaScript code is the one from the 4 snippets provided with the subject.
- The requested pop-up shows correctly as expected.

The exercise is considered as failed if one of the instructions is not perfectly done.

 Yes

 No

### Ex05: W3C validation

Before starting the defense, copy the files provided in annex of the subject in the subfolder ex05.

- The document actually contains a doctype (html), a head and a body.
- All the beacons are well formatted, their semantics and the separation between the background and the shape is respected (no h1 to enlarge text for exemple). This applies on tabs and lists too.

- There is no unexpected or weird display. (This applies on tabs and lists too, the special characters (including accents) are handled.)
- The returned page pass the W3C's validation without error : [https://validator.w3.org/#validate\\_by\\_upload+with\\_options](https://validator.w3.org/#validate_by_upload+with_options) ([https://validator.w3.org/#validate\\_by\\_upload+with\\_options](https://validator.w3.org/#validate_by_upload+with_options))
- The wrong code is not deleted but corrected to pass the validation. It's out of the question to delete code instead of correcting it. The corrected page must be "identical" to the original.

The exercise is considered as failed if one of the instructions is not perfectly done.

 Yes

 No

## Ratings

Don't forget to check the flag corresponding to the defense

 Ok

 Outstanding project

 Empty work

 Incomplete work

 Cheat

 Crash

 Concerning situation

 Forbidden function
